

CS2300 Project 3 Report

--- Zhidong Liu, zl479

1.

Username: admin

Password: admin

Besides, you can register your own account on my website.

2.

My idea is that, only user himself or admin can see his albums. User cannot see others' albums. But they can see all photos.

So when you delete an album, only user himself or admin can delete this album. But only admin can delete photos.

3.

Everything you need can be see from the navigation or webpage.

When you open an album, you can see its details, update it or delete it.

When you open a photo, you can see its details, update it or delete it.

When you add a photo, you can see its details.

4.

Improvement: Whole system is much stabler than the past project.

Add login and register function.

Add session.

Add more operations between php and mysql.
